August 5, 2009

Mr. Trent Regier
Public Health
Cypress Health Region
Swift Current, SK

Sir;

I write to offer our services in assisting Public Health with the administration of H1N1 Vaccine in the CHR should the need arise.

Our two pharmacists, Gordon Stueck and Leah Butt, are currently being trained by NP Mikki Millar on vaccine administration. It is expected this training will be completed by mid-August.

Stueck Pharmacy is expecting delivery soon of an Haier-260 Vaccine & Biological Refrigerator complete with a paper temperature log recorder. We have also purchased a number of coolers that meet the stringent cold-chain requirements of Health Canada. It is with this equipment we can confidently offer our services.

Assuming the vaccine would be provided through Public Health or CHR, we are prepared to:

- Administer or assist in the administration of the vaccine.
- Record and track those receiving the vaccine, either by inputting the data directly into your database, or providing the required information in a paper format suitable for input into the database by your staff. We would also ensure that information would also be recorded in the Pharmacy Information Program (PIP).
- Arrange for on-site and remote site pharmacist attendance to perform the vaccinations.
- Arrange the storage and transport of vaccine while maintaining the cold-chain.
- Perform the aforementioned at no charge as a service to our community.

Leah and I recognize the logistical difficulties involved in undertaking a rapid mass vaccination program. We would prefer to be part of the solution rather than bystanders.

I trust you will give our offer of assistance serious consideration and would be prepared to meet with you regarding same.

Yours truly,

Gordon Stueck, BSP
